

ĐỖ MỸ UYÊN

Product / LiveOps Intern

Ho Chi Minh City | 0981541661 | uyen150203@gmail.com | LinkedIn: [Mỹ Uyên Đỗ](#) | Portfolio: wrabbit15.github.io/do-my-uyen-portfolio

PROFILE

Digital Business graduate (RMIT Vietnam) and Data Analyst Intern at VNG Games' Game Data Studio, experienced in SQL, dashboards, retention and funnel analysis and data requests from internal teams. A long-time, paying player of PUBG Mobile, Valorant and TFT who follows gaming communities. Seeking a Product / LiveOps internship at a Game Studio to turn player behavior data into better events, monetization and retention.

EDUCATION

RMIT University Vietnam | Bachelor of Business (Digital Business)

2022 - 2026

- Completed a 6-month student exchange at RMIT Australia in 2023, strengthening communication and adaptability in an international environment.
- Relevant coursework: Business Statistics, Introduction to Business Analytics, Digital Business Design and Innovation, Digital Business Transformation.

WORK EXPERIENCE

VNG Games – Game Data Studio (GDS) | Data Analyst Intern

06/2026 - Present

Level Up Games 7-Day Review | SQL, retention and funnel analysis, gameplay behavior

- Situation:** Two PC games joined the Level Up platform on the same day; internal teams needed to know how each performed in week one.
- Task:** Compare first-week engagement, download funnel, gameplay behavior and delivery load to explain the performance gap.
- Action:** Analyzed active devices, D1–D7 retention, view-to-first-play funnel and drop-offs, session length/frequency, uninstalls and download load.
- Results:** Showed the leading game had 2.5× first-week reach and ~3× Day-7 retention (27% vs 9%) with near-identical ~94% funnel conversion, identifying post-install engagement (not acquisition) as the key difference and flagging its higher uninstall rate for monitoring.

Nexus Mini-Apps Adoption & Engagement Analysis | SQL, Grafana dashboards, engagement analysis

- Situation:** Nexus, an internal platform of ~55 mini-apps used by 18 departments, lacked a clear view of adoption, engagement and data quality.
- Task:** Measure platform growth, app performance and user behavior, and assess whether event-tracking data could be trusted.
- Action:** Queried 1M+ events from 1,100+ users with SQL; built Grafana dashboards for MAU/DAU, reach vs. engagement, View → Click → Submit funnel and heatmaps.
- Results:** Found MAU grew ~36% (Jan–May), driven by more active users, with the largest drop-off at task completion; recommended better visibility for low-usage apps, fixing missing tracking fields and monitoring completion metrics.

Data Request Tickets from Internal Stakeholders | SQL, DBeaver, AI-assisted workflow

- Situation:** Game Studios and other internal departments send ad-hoc data requests to GDS to support reporting and decisions.
- Task:** Deliver accurate, on-time data for each ticket while running analysis projects in parallel.
- Action:** Clarified needs with requesting teams, wrote and validated SQL in DBeaver, used Claude/ChatGPT to draft and review queries, set weekly goals.
- Results:** Delivered validated data on schedule, built a faster AI-assisted workflow and learned VNG's cross-team collaboration and work culture.

ACADEMIC PROJECT EXPERIENCE

StockX AR Virtual Try-On Feature Proposal | BPMN, use cases, CATWOE, cost-benefit analysis, product design

- Situation:** StockX users could not visualize how products fit before purchase, increasing dissatisfaction under a strict return policy.
- Task:** Design a digital feature that improves purchase confidence and customer experience.
- Action:** Mapped AS-IS/TO-BE journeys, created BPMN and use cases, assessed stakeholders with CATWOE and prototyped the cart-to-payment flow.
- Results:** Proposed an AR try-on feature backed by cost-benefit logic, defining product requirements from both user and business perspectives.

Ogilvy Global Marketing Campaign Performance Analytics | RStudio, data cleaning, descriptive analytics, visualization

- Situation:** Ogilvy had global campaign data across cities, channels, customer groups and languages.
- Task:** Clarify where marketing value was created and which areas needed optimization.
- Action:** Cleaned 3,036 rows and 14 variables in RStudio; compared ROI, conversion rate, acquisition cost, clicks and engagement by segment.
- Results:** Delivered benchmark insights for efficient markets and channels, and recommended dashboard-backed monitoring and attribution experiments.

IntelliAuto Employee Turnover Reduction Strategy | Logistic regression, Excel Solver, prescriptive analytics

- Situation:** IntelliAuto faced early-turnover risk during an Industry 4.0 transition.
- Task:** Prioritize retention actions under limited training hours and compensation budget.
- Action:** Estimated departure probability for 750 employees with logistic regression, then used Excel Solver to allocate seminars and incentives.
- Results:** Recommended a feasible 10% reduction plan and showed that a 40% target required additional resources and broader HR interventions.

IQuest / Phu Xuan AI-Driven Enrollment Marketing Initiative | AWS Data Lake, ETL, K-Means, dashboard thinking, business case

- Situation:** IQuest's ERP, CRM, academic and social media data were scattered, limiting data-driven enrollment decisions.
- Task:** Propose a scalable data and AI initiative to support targeted recruitment.
- Action:** Designed a two-phase plan (S3 Data Lake, Glue ETL, SageMaker K-Means, dashboard metrics); evaluated costs, risks, OKRs and timeline.
- Results:** Built a 6-month business case targeting 15% Chinese Language enrollment growth through data-driven marketing decisions.

ADDITIONAL EXPERIENCE

Personal Stock Investment Research

2024 - Present

- Track Vietnamese market news, company performance and valuation signals; keep structured notes for evidence-based decisions.
- Set up an automated ChatGPT chat that reports the VN market every Mon & Fri, evaluates my portfolio and suggests investment actions.

Gaming & Community Involvement

High school - Present

- PUBG Mobile in high school; Valorant, TFT, Genshin Impact, Steam and mobile games at university; now Valorant on weekends (paying player).
- Run a Discord server for weekly games; follow Valorant communities on Discord/Facebook, game news, streamers and content creators.

SKILLS

Product & LiveOps: KPI tracking (DAU/MAU, retention, funnel, conversion), cohort and engagement analysis, user journey mapping, feature proposals.

Data Analytics: Data cleaning, descriptive, predictive and prescriptive analytics, regression, segmentation, dashboards, insight storytelling.

Business Analysis: Requirement analysis, BPMN, use cases, AS-IS/TO-BE process mapping, SWOT, cost-benefit analysis.

Tools: SQL, Power BI, Grafana, DBeaver, VS Code, Excel, RStudio, Claude, ChatGPT, Jira, Notion, Lucidchart, Canva, Microsoft Office.

Soft Skills: Communication with internal stakeholders, presentation, time and goal management, teamwork, attention to detail, fast learning.
